[] Sales Letter / [] Press Release: Squaring the Circle: The Oil Painting

Gentlemen,

What is offered here is number _____ of 100 of a limited signed _____ edition of the original oil painting prints of the validated graphical solution to the apparently 2200-5800 year old problem referred to in the literature as "Squaring the Circle". Due to the age of the problem, it is believed reasonable to consider the solution as an antiquity. More specifically, the solution would stand whether or not man ever existed; therefore obviously independent of my existence as well, simply a consequence of The Divine's enumeration of the Universe.

Included is:

1. This "Squaring of the Circle" sales letter, signed.
2. The non-representative artwork as colorized in the artist's interpretation of the energy points the Hindus refer to as chakras, as aligned to the Arabic tradition of six chakras.
3. The step by step labeled geometric proof of the form: Given: Steps: Therefore.
4. The associated black and white labeled geometric construct.
5. The Validation statement by a MS ME PE MIT 1960.
6. Validator curricula vitae.

, Richard Anthony Dunn, Jr., as a matter of primacy of discovery, hereby certify under seal that I am the sole prosecutor and subsequent copyright holder of this material registered with the US Copyright Office under all applicable international treaties.

Separately, included is one copy of the signed letter of validation from one Mr. Jan Roos, MS ME MIT PE 1960 validating the feat with a copy of the gentleman's CV.?

Everything is Possible; the Impossible just takes longer... Anon.

[Background]

History

It has been said that the "Squaring of the Circle" is impossible. In 1755 **The Royal Society of London for Improving Natural Knowledge** refused to take further proofs; the following year, 1756, France's **Académie des Sciences** followed suit. It has been believed that according to Lindemann-Weierstrass theorem, 1882, proof of Pi being transcendental, the Squaring of the Circle was impossible. Lindemann also purported to correct Sir Isaac Newton. Newton, a man of much gravity, was also apparently an avid "Circle Squarer", a term with quixotic overtones, eventually used as a point of derision for anyone involved in such an attempt. It is obvious based on the evidences herein that Newton has had the last laugh.

Klaus Schröder's 1988 Book, Das Geheimnis der Proportionsstudie, Waxmann Verlag, Germany examines Leonardo Da Vinci's attempt to "Square the Circle" in the master's work **Vitruvian Man**. The work is accurate to 99.8% giving an error of 0.2%.

Although Schröder believes the Da Vinci work definitive, and although I personally admire Da Vinci, any error is not 100%...

Context

The literature seems to indicate that the problem is 5,800 years old and may well have come from Egypt. In this context it must be remembered that all engineering and mathematics problems are products of their time and

cultural and societal norms, to do less is to engage in cultural bigotry. In essence, "He who frames the question dictates the answer. Anonymous." This is important as the author believes it was not possible to solve this problem until the discovery of the Rhind papyrus which included an ancient Egyptian valuation of Pi being equal to or $256/81$ or $3.1604938271604938271604938271605$.

Solution

From this we have the following algebraic solution, which is the basis of the graphical solution, otherwise to be made available in a book currently being edited:

Given: Formulae: Area of a square = $L \times W$, Area of Circle = $\pi \times R \times R$

Proof [Simplistic]:

[1] $A_{\text{square}} = 256 \times 256 = 65536$

[2] $A_{\text{circle}} = 256/81 \times 144 \times 144 = 65536$

[3] $A_{\text{square}} = A_{\text{circle}}$

The Circle is squared.

I personally believe that what is presented here defies the chaos theory of modern mathematics, fractures finite statistical logic by proving intelligent design based on its improbability and gives us a view to the mind of The Divine as "Dues ex machina" in the morality play called life. This design opens a door to an advanced mathematics, that some have called Sacred, long stalled at Fibonacci's spiral.

In closing, who can argue with the mathematics and geometry presented here, as calculated precision meets the accuracy of what is measured and the proof is presented. I have personally seen engineers become irrational looking at this and at some point engineering, like any belief system becomes a religion and hence irrational. Yet, they cannot touch the math.

Simply, I have broken the ancient numbering systems.

I wish to thank The One Above All, The Source and the Divine Spark within me for giving me the insight and their sense of humor for allowing me such a gift, for which I am grateful. Hence the name of the work, "I am Grateful: The Squaring of The Circle."

Best wishes,

Richard A. Dunn, Jr.
